SECTION 1

EO M404.01 – PARTICIPATE IN THE CADET FITNESS ASSESSMENT

Total Time: 60 min

PREPARATION

PRE-LESSON INSTRUCTIONS

Resources needed for the delivery of this lesson are listed in the lesson specification located in A-CR-CCP-804/PG-001, Proficiency Level Four Qualification Standard and Plan, Chapter 4. Specific uses for said resources are identified throughout the instructional guide within the TP for which they are required.

Review the lesson content and become familiar with the material prior to delivering the lesson. Additional information on the Cadet Fitness Assessment can be found in CATO 14-18, Cadet Fitness Assessment and Incentive Program.

Photocopy the Cadet Fitness Assessment Scoresheet located at Attachment B and the 20-m Shuttle Run Test Individual Scoresheet B located at Attachment C for each cadet.

The cadets will complete the Cadet Fitness Assessment in pairs. The 20-m Shuttle Run Test will be conducted first, with the remaining stations run as a circuit.

PRE-LESSON ASSIGNMENT

Nil.

APPROACH

A practical activity was chosen for this lesson as it allows the cadets to participate in the Cadet Fitness Assessment in a safe and controlled environment.

INTRODUCTION

REVIEW

Review how to conduct the components of the Cadet Fitness Assessment from EO M304.01 (Describe the Components of Physical Fitness).

OBJECTIVES

By the end of this lesson the cadet shall have participated in the Cadet Fitness Assessment.
IMPORTANCE

It is important for the cadets to participate in the Cadet Fitness Assessment to determine their personal fitness level, and when conducted multiple times over the course of the year, it allows progress to be tracked. Determining personal fitness level will also allow the cadets to create personal goals and will assist with updating a Personal Activity Plan.
Teaching Point 1

Conduct a warm-up session composed of light cardiovascular exercises.

Time: 5 min

Method: Practical Activity

The following information will be explained to the cadets during the warm-up session.

PURPOSE OF A WARM-UP

A warm-up session is composed of stretches and light cardiovascular exercises designed to:

- stretch the muscles;
- gradually increase respiratory action and heart rate;
- expand the muscles' capillaries to accommodate the increase in blood circulation which occurs during physical activity; and
- raise the muscle temperature to facilitate reactions in muscle tissue.

GUIDELINES FOR STRETCHING

The following guidelines should be followed while stretching to prepare for physical activity and to help prevent injury:

- Stretch all major muscle groups, including the back, chest, legs, and shoulders.
- Never bounce while stretching.
- Hold each stretch for 10–30 seconds to let the muscles release fully.
- Repeat each stretch two to three times.
- When holding a stretch, support the limb at the joint.
- Static stretching, which is stretching a muscle and holding it in position without discomfort for 10–30 seconds, is considered the safest method.
- Stretching helps to relax the muscles and improve flexibility, which is the range of motion in the joints.
- As a guide, allow 10 minutes to warm up for every hour of physical activity.

The stretches chosen should focus on the areas of the body that will be used the most during the physical activity.
ACTIVITY

OBJECTIVE
The objective of this warm-up activity is to stretch the muscles and perform light cardiovascular exercises to prepare the body for physical activity and to help prevent injuries.

RESOURCES
Nil.

ACTIVITY LAYOUT
Nil.

ACTIVITY INSTRUCTIONS
1. Arrange the cadets in either a warm-up circle or in rows (as illustrated in Figures 1 and 2).

![Figure 1 Instructor in the Centre of a Warm-Up Circle](Note. Created by Director Cadets 3, 2006, Ottawa, ON: Department of National Defence.)

2. Demonstrate before having the cadets attempt each stretch / light cardiovascular exercise.

![Figure 2 Instructor at the Front with Two Assistant Instructors](Note. Created by Director Cadets 3, 2006, Ottawa, ON: Department of National Defence.)
3. Assistant instructors may help demonstrate the exercises and ensure the cadets are performing them correctly.

4. Have cadets perform each stretch / light cardiovascular exercise.

**SAFETY**

- Ensure there are at least two arm lengths between the cadets so they can move freely.
- Ensure the cadets perform the stretches and light cardiovascular exercises in a safe manner, following the guidelines for stretching listed in this TP.

**CONFIRMATION OF TEACHING POINT 1**

The cadets' participation in the warm-up session will serve as the confirmation of this TP.

**Teaching Point 2**

**Supervise while the cadets perform and score the Cadet Fitness Assessment.**

**Time:** 15 min  
**Method:** Practical Activity

The cadets will participate in the Cadet Fitness Assessment in pairs.

The 20-m Shuttle Run Test will be conducted before the other assessments. A summary of how to conduct the 20-m Shuttle Run Test is located at Attachment C.

The remaining assessments will be conducted as a circuit (summaries of how to conduct the assessments are located at the respective attachments) and are as follows:

1. the curl-up, located at Attachment D,
2. the push-up, located at Attachment E, and
3. choose two of the following:
   a. the trunk lift, located at Attachment F,
   b. the shoulder stretch, located at Attachment G, and
   c. the back-saver sit and reach, located at Attachment H.

**ACTIVITY**

**OBJECTIVE**

The objective of this activity is to have the cadets perform and score the 20-m Shuttle Run Test.
RESOURCES

- *Leger 20-m Shuttle Run Test CD,*
- CD player,
- Pylons, and
- Photocopies of the *20-m Shuttle Run Test Individual Scoresheet B* located at Attachment C.

ACTIVITY LAYOUT

Nil.

ACTIVITY INSTRUCTIONS

1. Divide the cadets into pairs.
2. Distribute the *20-m Shuttle Run Test Individual Scoresheet B* and pens / pencils to one cadet from each pair.
3. Have the cadets with the scoresheet print their partner’s name on the scoresheet and sit behind the starting line ready to record results.
4. Have the cadets who are running the 20-m Shuttle Run Test line up in their respective lanes at the starting line and wait for instructions from the CD.
5. Play the CD. The scorekeeper will record the number of laps that are successfully completed on the scoresheet. The supervisors at each line will inform the scorekeeper when a cadet does not cross the line before the beep. The 20-m Shuttle Run Test is complete when all the cadets have not reached the line before the beep for the second time.
6. Once completed, have the cadets who ran the 20-m Shuttle Run Test become the scorekeepers and the scorekeepers become the runners.
7. Repeat Steps 2–6.

SAFETY

- Ensure a designated first-aider and first aid kit are available.
- Ensure water is available for the cadets after they complete the 20-m Shuttle Run Test.

---

Distribute the Cadet Fitness Assessment Scoresheet located at Attachment B to each cadet prior to starting the circuit.

---

ACTIVITY

OBJECTIVE

The objective of this activity is to have the cadets perform and score the curl-up.
RESOURCES

- CD player,
- Gym mats, and
- Curl-up measuring strip.

ACTIVITY LAYOUT

Nil.

ACTIVITY INSTRUCTIONS

1. Have one cadet from each pair:
   a. lay on their back with head down;
   b. bend their knees at an angle of approximately 140 degrees;
   c. place their feet flat and legs slightly apart; and
   d. rest their palms on the mat with their arms straight, parallel to their trunk, and fingers stretched out.

2. The scorekeeper will place the measuring strip on the mat under the cadet's knees so the fingertips are resting on the nearest edge of the measuring strip.

3. The cadet on the mat will curl up, ensuring their fingers reach the other side of the measuring strip, repeatedly at a cadence of one curl every three seconds until a second form correction (the first form correction does not count) is made, they can no longer continue, or they have completed 75 curl ups.

4. The scorekeeper will count how many times the cadet can curl up (which is the curl-up score).

5. Have the cadets switch positions and repeat Steps 1–4.

SAFETY

Ensure that the curl-up is conducted using the proper position / form.

ACTIVITY

OBJECTIVE

The objective of this activity is to have the cadets perform and score the push-up.

RESOURCES

Nil.

ACTIVITY LAYOUT

Nil.

ACTIVITY INSTRUCTIONS

1. Have one cadet from each pair:
   a. lay face down;
   b. place their hands under or slightly wider than their shoulders, with fingers stretched out;
c. straighten their legs with feet slightly apart; and

d. tuck their toes under the shins.

2. Have the cadet push up with their arms until they are straight, keeping the legs and back aligned.

3. Have the cadet lower their body using their arms until the elbows bend at a 90-degree angle and the upper arms are parallel to the floor.

4. Have the cadet repeat steps two and three repeatedly at a cadence of one push-up every three seconds until a second form correction (the first form correction does not count) is made, or they can no longer continue.

5. The scorekeeper will count how many times the cadet can complete a push-up (which is the push-up score).

6. Have the cadets switch positions and repeat Steps 1–5.

SAFETY

Ensure that the push-up is conducted using the proper position / form.

---

ACTIVITY

OBJECTIVE

The objective of this activity is to have the cadets perform and score the trunk lift.

RESOURCES

- Gym mats, and
- Trunk lift measuring device.

ACTIVITY LAYOUT

Nil.

ACTIVITY INSTRUCTIONS

1. Have one cadet from each pair:
   a. lay face down on the mat;
   b. point their toes towards the end of the mat; and
   c. place their hands under thighs.

2. Place a marker (a coin will suffice) on the mat aligned with the cadet's eyes.

3. Have the cadet lift their upper body off the floor in a slow and controlled manner, to a maximum height of 30 cm (12 inches). Ensure their head is aligned straight with the spine.

4. Have the cadet hold this position until the height can be measured.

5. The scorekeeper will measure the distance, in inches between the mat and the cadet's chin to determine the trunk lift score. The score will be a maximum of 12 inches to prevent hyperextension.

6. Have the cadets switch positions and repeat Steps 1–5.
SAFETY

- The ruler should be placed at least one inch from the cadet’s chin and not directly under the chin.
- The cadets shall not bounce or hyperextend their backs while performing the trunk lift.

ACTIVITY

OBJECTIVE

The objective of this activity is to have the cadets perform and score the shoulder stretch.

RESOURCES

Nil.

ACTIVITY LAYOUT

Nil.

ACTIVITY INSTRUCTIONS

1. Have one cadet from each pair test their right shoulder by:
   a. reaching with the right hand over the right shoulder and down the back; and
   b. reaching with the left hand behind the back to touch the right hand.
2. The scorekeeper will observe if the hands are touching to determine the right shoulder stretch score (a yes or no).
3. Have the cadet test their left shoulder by:
   a. reaching with the left hand over the left shoulder and down the back; and
   b. reaching with the right hand behind the back to touch the left hand.
4. The scorekeeper will observe if the hands are touching to determine the left shoulder stretch score.
5. Have the cadets switch positions and repeat Steps 1–4.

SAFETY

Nil.

ACTIVITY

OBJECTIVE

The objective of this activity is to have the cadets perform and score the back-saver sit and reach.

RESOURCES

Back-saver sit and reach test apparatus (instructions located at Attachment I).

ACTIVITY LAYOUT

Nil.
ACTIVITY INSTRUCTIONS

1. Have one cadet from each pair remove their shoes.

2. Have the cadet:
   a. sit in front of the test apparatus;
   b. extend one leg fully with the foot flat against the face of the box;
   c. bend the knee of the other leg with the sole of the foot flat on the floor placed next to the knee of the straight leg;
   d. ensure that there is a 5–8 cm (2–3 inch) space between the knee on the straight leg, and the foot of the bent leg; and
   e. extend their arms forward with the hands placed on top of one another placing the finger tips just in front of the tip of the ruler.

3. Have the cadet reach forward with both hands along the scale four times, holding the position on the fourth reach for at least one second.

4. The scorekeeper will measure the distance, in inches that the cadet reached. This measurement will be the score for one leg, to a maximum of 12 inches to prevent hyperextension.

5. Have the cadet repeat steps one to three for the other leg.

6. Have the cadets switch positions and repeat Steps 1–4.

SAFETY

Nil.

CONFIRMATION OF TEACHING POINT 2

The cadets’ participation in the Cadet Fitness Assessment will serve as the confirmation of this TP.

Teaching Point 3 Conduct a cool-down session composed of light cardiovascular exercises.

Time: 5 min Method: Practical Activity

The following information will be explained to the cadets during the cool-down session.

PURPOSE OF A COOL-DOWN

A cool-down is composed of stretches and light cardiovascular exercises designed to:

- allow the body time to slowly recover from physical activity and to help prevent injury;
- prepare the respiratory system to return to its normal state; and
- stretch the muscles to help relax and restore them to their resting length.
The stretches chosen should focus on the areas of the body that were used the most during the sports activity.

---

**ACTIVITY**

**OBJECTIVE**

The objective of the cool-down is to stretch the muscles and perform light cardiovascular exercises that allow the body time to recover from physical activity and to prevent injury.

**RESOURCES**

Nil.

**ACTIVITY LAYOUT**

Nil.

**ACTIVITY INSTRUCTIONS**

1. Arrange the cadets in either a warm-up circle or in rows (as illustrated in Figures 1 and 2 of TP 1).
2. Demonstrate before having the cadets attempt each stretch / light cardiovascular exercise.
3. Assistant instructors may help demonstrate the movements and ensure the cadets are performing them correctly.
4. Have cadets perform each stretch / light cardiovascular exercise.

**SAFETY**

- Ensure there are at least two arm lengths between the cadets so they can move freely.
- Ensure the cadets perform the stretches and light cardiovascular exercises in a safe manner, following the guidelines for stretching listed in TP 1.

**CONFIRMATION OF TEACHING POINT 3**

The cadets’ participation in the cool-down session will serve as the confirmation of this TP.

**END OF LESSON CONFIRMATION**

The cadets’ participation in the Cadet Fitness Assessment will serve as the confirmation of this lesson.

**CONCLUSION**

**HOMEWORK / READING / PRACTICE**

Nil.
METHOD OF EVALUATION

Nil.

CLOSING STATEMENT

The Cadet Fitness Assessment determines personal fitness level and is an excellent tool for tracking progress in personal fitness.

INSTRUCTOR NOTES / REMARKS

The Cadet Fitness Assessment is an individual assessment used to set personal fitness goals. Results from this assessment shall not be used for competition or classification among cadets.

The Cadet Fitness Assessment shall be set up prior to conducting this EO.

This EO shall be conducted at the start and the end of the training year.

REFERENCES

SAMPLE STRETCHES

a. Neck:

Slowly roll your head across your chest from shoulder to shoulder. Do not roll your head backwards.

Figure A-1  Neck Stretch

b. Shoulders:

![Figure A-2 Shoulder Push]

**Figure A-2 Shoulder Push**

Stand and extend your arms behind you, interlocking your fingers. Push up and back with your shoulders.

Hold this position for a minimum of 10 seconds.

![Figure A-3 Shoulder Shrug]

**Figure A-3 Shoulder Shrug**

Stand and raise your shoulders as high as possible and then lower your shoulders, stretching your neck up.

Pull your shoulders back as far as possible and then round your shoulders forward by pushing your shoulders forward as far as possible.

Hold each position for a minimum of 10 seconds.

![Figure A-4 Arm Circles]

**Figure A-4 Arm Circles**

Hold your arms straight out, palms up. Make small circles with your arms, gradually increasing the size.

Reverse the direction of your circles.

![Figure A-5 Shoulder Stretch]

**Figure A-5 Shoulder Stretch**

Either standing or sitting, take your right arm in your left hand and bring it across your chest, supporting the joint by holding it behind the elbow. Pull the elbow lightly towards your chest. You should feel the stretch in your right shoulder.

Hold this position for a minimum of 10 seconds and repeat on the opposite side.
### c. Arms:

<table>
<thead>
<tr>
<th><strong>Figure A-6</strong>  Wrist Rotations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rotate your hands in circular motions at the wrist.</td>
</tr>
<tr>
<td>Change direction and repeat on both sides.</td>
</tr>
</tbody>
</table>

</tr>
</thead>
<tbody>
<tr>
<td>Stand and bring your right arm over your head, bent at the elbow. Use your left hand to gently pull your arm down.</td>
</tr>
<tr>
<td>Hold this position for a minimum of 10 seconds and repeat on the opposite side.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Figure A-8</strong>  Forearm Stretch</th>
</tr>
</thead>
<tbody>
<tr>
<td>In a kneeling position, place your hands on the floor in front of you with your fingers pointing toward your knees, and your thumbs pointing out. Keeping your hands flat on the floor, lean back.</td>
</tr>
<tr>
<td>Hold this position for a minimum of 10 seconds.</td>
</tr>
</tbody>
</table>

d. Chest and Abdominals:

**Figure A-9  Chest Stretch**

Stand facing a wall. With your right arm bent and your elbow at shoulder height, place your palm against the wall. Turn your body away from your right arm. You should feel the stretch on the front side of your armpit and across the front of your chest.

Hold this position for a minimum of 10 seconds and repeat on the opposite side.

**Figure A-10  Side Stretch**

Stand with your left arm up over your head. Bend at the waist towards the right side of your body.

Hold this position for a minimum of 10 seconds and repeat on the opposite side.
### e. Back:

<table>
<thead>
<tr>
<th>Figure A-11   Lower Back Stretch</th>
<th>Lie on your back and bring your knees toward your chest. Grasp the back of your knees. Hold this position for a minimum of 10 seconds.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Figure A-12   Upper Back Stretch</th>
<th>Extend your arms straight in front of you at shoulder height crossing one arm over the other. With the palms facing each other, intertwine your fingers and press out through your arms. Let your chin fall to your chest as you exhale. You should feel the stretch in the upper back. Hold this position for a minimum of 10 seconds and repeat on the opposite side.</th>
</tr>
</thead>
</table>
f. Legs:

<table>
<thead>
<tr>
<th>Figure A-13</th>
<th>Hamstring Stretch</th>
</tr>
</thead>
</table>

Lie flat on the floor with your knees bent and your back flat on the floor. Slowly raise and straighten one leg, grasping it behind your thigh with both hands.

Hold this position for a minimum of 10 seconds.

<table>
<thead>
<tr>
<th>Figure A-14</th>
<th>Inner Thigh Stretch</th>
</tr>
</thead>
</table>

Sit on the floor with your knees bent and the soles of your feet together. Grab your toes and pull yourself forward while keeping your back and neck straight.

Hold this position for a minimum of 10 seconds.

- Grab your ankles and push your knees down toward the floor with your elbows.

Hold this position for a minimum of 10 seconds.

<table>
<thead>
<tr>
<th>Figure A-15</th>
<th>Hip Flexor</th>
</tr>
</thead>
</table>

Kneel on your right knee. Position your left foot in front of you, bending your knee and placing your left hand on that leg for stability. Keep your back straight and abdominal muscles tight. Lean forward, shifting more body weight onto your front leg. You should feel the stretch in the front of your hip and the thigh of the leg you are kneeling on. Cushion your kneecap with a folded towel if necessary.

Hold this position for a minimum of 10 seconds and repeat on the opposite side.
f. Legs Continued:

**Figure A-16 Ankle Rotations**

From a sitting position, rotate your foot in a clockwise, and then a counter-clockwise, direction. Switch and repeat on the opposite side.

**Figure A-17 Calf Stretch**

Stand three steps away from and facing a wall. Step in towards the wall with your right leg, bending your right knee and keeping your left leg straight. Extending your arms with your palms forward, reach out to the wall and let your body fall toward the wall. Keep your toes forward and your heels down. Lean your body into the wall with your left leg straight behind your body. You should feel the stretch in your left calf.

Hold this position for a minimum of 10 seconds and repeat on the opposite side.

**Figure A-18 Quadriceps Stretch**

Stand with your hand against a wall for balance. Lift your left foot off the ground, bending your knee as if you are trying to kick your bottom with your heel. Do not lean forward at the hips. Grab and hold your ankle with your left hand. You should feel the stretch in your left thigh.

Hold this position for a minimum of 10 seconds and repeat on the opposite side.

### Cardiovascular

20-m Shuttle Run Test

### Muscular Strength

- Curl-up
- Push-up

### Muscular Flexibility

- Trunk Lift
- Shoulder Stretch
  - Right: [ ]  
  - Left: [ ]  
- Back-Saver Sit and Reach
  - Right: [ ]  
  - Left: [ ]

*Note. Created by Director Cadets 3, 2007, Ottawa, ON: Department of National Defence.*
20-m Shuttle Run Test

Objective:
The 20-m Shuttle Run Test is progressive, in that it begins with an easy pace and gradually becomes more challenging as time passes. The 20-m Shuttle Run Test is an individual assessment and is based on personal ability.

The 20-m Shuttle Run Test consists of running a distance of 20 m repeatedly, at a specified pace that increases each minute. Each cadet will be expected to run until they can no longer continue.

Scoring:
The 20-m Shuttle Run Test will be scored using the 20-m Shuttle Run Test Individual Scoresheet B at Annex C. Each circle on the scoresheet represents a lap. When the cadet completes a lap they receive a check mark. If they are unsuccessful they receive an X. The cadet has completed the 20-m Shuttle Run Test when they are unable to successfully complete a lap a second time.

Equipment Required:
- CD player, and
- Pylons.

Set-Up:
1. Set up two lines (pylons) a distance of 20 m apart.
2. Create 100- to 150-cm (40- to 60-inch) lanes depending on the number of participants, using pylons (as illustrated in Figure C-1).
3. Ensure that the CD player is close by and can be heard by all participants.

Figure C-1 20-m Shuttle Run Test Layout

Note. Created by Director Cadets 3, 2006, Ottawa, ON: Department of National Defence.
Conducting the 20-m Shuttle Run Test:

1. Divide the cadets into pairs.
2. Distribute the *20-m Shuttle Run Test Individual Scoresheet B* and pens / pencils to one cadet from each pair.
3. Have the cadets with the scoresheet print their partner’s name on the scoresheet and sit behind the starting line ready to record results.
4. Have the cadets who are running the 20-m Shuttle Run Test line up in their respective lanes at the starting line and wait for instructions from the CD.
5. Play the CD. The scorekeeper will record the number of laps that are successfully completed on the scoresheet. The supervisors at each line will inform the scorekeeper when a cadet does not cross the line before the beep. The 20-m Shuttle Run Test is complete when all the cadets have not reached the line before the beep for the second time.
6. Once completed, have the cadets who ran the 20-m Shuttle Run Test become the scorekeepers and the scorekeepers become the runners.
7. Repeat Steps 2–6.
**Figure C-2** Fitnessgram 20-m Shuttle Run Test Individual Scoresheet B

### Curl-Up

**Objective:**
The curl-up with knees bent and feet unanchored was chosen because it is a safe method for assessing abdominal strength and endurance.

This assessment is conducted by curling up repeatedly at a pace of one curl-up every three seconds until a second form correction is made (the first form correction does not count), the person can no longer continue, or has completed 75 curl-ups.

**Scoring:**
Scoring is based on the number of curl-ups that are completed; until a second form correction (the first form correction does not count) is made, the participant can no longer continue or the participant has completed 75 curl-ups.

**Equipment Required:**
- *Fitnessgram 8.0 Stand-Alone Test Kit*,
- CD player,
- Gym mats, and
- Curl-up measuring strip.

**Set-Up:**
1. Set up each curl-up station with a gym mat and a curl-up measuring strip.
2. Ensure that the CD player is close by and can be heard by all participants.

**Conducting the Curl-Up:**
1. Have one cadet from each pair:
   a. lay on their back with head down;
   b. bend their knees at an angle of approximately 140 degrees;
   c. place their feet flat and legs slightly apart; and
   d. rest their palms on the mat with their arms straight, parallel to their trunk, and fingers stretched out (as illustrated in Figure D-1).
2. The cadet on the mat will curl up (as illustrated in Figure D-2), ensuring their fingers reach the other side of the measuring strip (as illustrated in Figure D-3), repeatedly at a cadence of one curl every three seconds until a second form correction (the first form correction does not count) is made, they can no longer continue or have completed 75 curl-ups.
3. The scorekeeper will count how many times the cadet can curl up (which is the curl-up score).
4. Have the cadets switch positions and repeat Steps 1–4.
<table>
<thead>
<tr>
<th>Push-Up</th>
</tr>
</thead>
</table>

**Objective:**
The push-up from an elbow angle of 90 degrees is a test of upper body strength and endurance. This assessment is conducted by pushing up repeatedly at a pace of one push-up every three seconds until a second form correction is made (the first form correction does not count) or the person can no longer continue.

**Scoring:**
Scoring is based on the number of push-ups that are completed, until a second form correction (the first form correction does not count) is made or the participant can no longer continue.

**Equipment Required:**
- CD player.

**Set-Up:**
1. Ensure that the push-up station is set up with enough space for the number of participants.
2. Ensure that the CD player is close by and can be heard by all.

**Conducting the Push-Up:**
1. Have one cadet from each pair:
   a. lay face down;
   b. place their hands under or slightly wider than their shoulders, with fingers stretched out;
   c. straighten their legs with feet slightly apart; and
   d. tuck their toes under the shins.
2. Have the cadet push up with their arms until they are straight, keeping the legs and back aligned (as illustrated in Figure E-1).
3. Have the cadet lower their body using their arms until the elbows bend at a 90-degree angle and the upper arms are parallel to the floor (as illustrated in Figure E-2).

4. Have the cadet repeat steps two and three repeatedly at a cadence of one push-up every three seconds until a second form correction (the first form correction does not count) is made, or they can no longer continue.

5. The scorekeeper will count how many times the cadet can complete a push-up (which is the push-up score).

6. Have the cadets switch positions and repeat Steps 1–5.
# Push-Up

## Objective:
The push-up from an elbow angle of 90 degrees is a test of upper body strength and endurance. This assessment is conducted by pushing up repeatedly at a pace of one push-up every three seconds until a second form correction is made (the first form correction does not count) or the person can no longer continue.

## Scoring:
Scoring is based on the number of push-ups that are completed, until a second form correction (the first form correction does not count) is made or the participant can no longer continue.

## Equipment Required:
- *FITNESSGRAM 20-m Shuttle Run Test CD: Push-Up Cadence, and CD player.*

## Set-Up:
1. Ensure that the push-up station is set up with enough space for the number of participants.
2. Ensure that the CD player is close by and can be heard by all.

## Conducting the Push-Up:
1. Have one cadet from each pair:
   a. lay face down;
   b. place their hands under or slightly wider than their shoulders, with fingers stretched out;
   c. straighten their legs with feet slightly apart; and
   d. tuck their toes under the shins.
2. Have the cadet push up with their arms until they are straight, keeping the legs and back aligned (as illustrated in Figure E-1).
3. Have the cadet lower their body using their arms until the elbows bend at a 90-degree angle and the upper arms are parallel to the floor (as illustrated in Figure E-2).

4. Have the cadet repeat Steps 2 and 3 repeatedly at a cadence of one push-up every three seconds (the cadence CD found in Fitnessgram 8.0 Stand-Alone Test Kit may be used) until a second form correction (the first form correction does not count) is made, or they can no longer continue.

5. The scorekeeper will count how many times the cadet can complete a push-up (which is the push-up score).

6. Have the cadets switch positions and repeat Steps 1–5.
Shoulder Stretch

**Objective:**
The shoulder stretch is an assessment of upper arm and shoulder flexibility. This assessment is conducted by reaching one arm over the shoulder on the same side, and the other arm behind the back to touch the fingertips.

**Scoring:**
Scoring for the shoulder stretch is based on the participant's ability to touch their fingers on both their right and left sides. The score is indicated with a yes (Y) or no (N) on the scoresheet.

**Equipment Required:**
There is no equipment required for the shoulder stretch.

**Set-Up:**
The shoulder stretch station should be large enough to accommodate the participants.

**Conducting the Shoulder Stretch:**
1. Have one cadet from each pair test their right shoulder by:
   a. reaching with the right hand over the right shoulder and down the back; and
   b. reaching with the left hand behind the back to touch the right hand (as illustrated in Figure G-1).

![Figure G-1 Right Shoulder Stretch](image)

2. The scorekeeper will observe if the hands are touching to determine the right shoulder stretch score (a yes or no).

3. Have the cadet test their left shoulder by:
   a. reaching with the left hand over the left shoulder and down the back; and
   b. reaching with the right hand behind the back to touch the left hand (as illustrated in Figure G-2).

Figure G-2  Left Shoulder Stretch

4. The scorekeeper will observe if the hands are touching to determine the left shoulder stretch score.

5. Have the cadets switch positions and repeat Steps 1–4.
Back-Saver Sit and Reach

Objective:
The back-saver sit and reach tests hamstring flexibility for each leg. This assessment is conducted by placing the foot flat against the test apparatus, bending the other leg and reaching forward with both hands. The same procedure is repeated for the other leg.

Scoring:
Scoring for the back-saver sit and reach is based on the distance (in inches) that the participant can reach with their hands for each leg, to a maximum of 30 cm (12 inches).

Equipment Required:
The only piece of equipment required for the back-saver sit and reach assessment is the test apparatus.

Set-Up:
1. Ensure that there are enough test apparatuses for the number of groups.
2. Spread out each back-saver sit and reach station to allow enough room for the participants and their scorekeepers.

Conducting the Back-Saver Sit and Reach:
1. Have one cadet from each pair remove their shoes.
2. Have the cadet:
   a. sit in front of the test apparatus;
   b. extend one leg fully with the foot flat against the face of the box;
   c. bend the knee of the other leg with the sole of the foot flat on the floor placed next to the knee of the straight leg;
   d. ensure that there is a 5- to 8-cm (2-to 3-inch) space between the knee on the straight leg, and the foot of the bent leg; and
   e. extend their arms forward with the hands placed on top of one another placing the finger tips just in front of the tip of the ruler (as illustrated in Figure H-1).
3. Have the cadet reach forward with both hands along the scale four times, holding the position on the fourth reach for at least one second (as illustrated in Figure H-2).

4. The scorekeeper will measure the distance in inches that the cadet reached. This measurement will be the score for one leg, to a maximum of 12 inches to prevent hyperextension.

5. Have the cadet repeat steps one to three for the other leg.

6. Have the cadets switch positions and repeat Steps 1–4.
HOW TO CONSTRUCT THE BACK-SAVER SIT AND REACH TEST APPARATUS

The test apparatus (as illustrated in Figure I-1) is constructed in the following fashion:

1. Construct or locate a cardboard / wooden box measuring approximately 30 cm (12 inches) high.

2. Attach a metre stick to the top of the box with the nine inch mark at the nearest edge of the box where the participant will rest their foot and the zero end closest to the participant.

![Figure I-1 Back-Saver Sit and Reach Measuring Apparatus](image)

SECTION 2
EO M404.02 – UPDATE PERSONAL ACTIVITY PLAN

Total Time: 30 min

PREPARATION

PRE-LESSON INSTRUCTIONS

Resources needed for the delivery of this lesson are listed in the lesson specification located in A-CR-CCP-804/PG-001, Proficiency Level Four Qualification Standard and Plan, Chapter 4. Specific uses for said resources are identified throughout the instructional guide within the TP for which they are required.

Review the lesson content and become familiar with the material prior to delivering the lesson.

Photocopy Attachment A (Sample Personal Activity Plan) and Attachment B (Personal Activity Plan) for each cadet.

Physical fitness resources can be printed or ordered from http://www.phac-aspc.gc.ca/pau-uap/fitness/downloads.html, through the Public Health Agency of Canada to be given as handouts to the cadets.

PRE-LESSON ASSIGNMENT

Ensure the cadets have a copy of their Proficiency Level Three Personal Activity Plan and their Cadet Fitness Assessment results to bring to this lesson.

APPROACH

A practical activity was chosen for this lesson as it is an interactive way to allow the cadets to update their Personal Activity Plan. This activity contributes to the development of personal fitness goals in a fun and challenging setting.

INTRODUCTION

REVIEW

Nil.

OBJECTIVES

By the end of this lesson the cadet shall have updated their Personal Activity Plan (from Proficiency Level Three) for the current training year.
IMPORTANCE

In order to help achieve success in physical fitness, it is important to know how to set personal fitness goals and to create an activity plan that will help to achieve those goals. This is important as physical fitness is one of the aims of the cadet program.
Teaching Point 1

Have the cadets update their Personal Activity Plan from Proficiency Level Three.

Time: 25 min

Method: Practical Activity

Describe the terms used in the Personal Activity Plan before having the cadets update their plan. Distribute the sample Personal Activity Plan handout located at Attachment A to each cadet.

A Personal Activity Plan is designed to identify current personal fitness level and to create individual goals to increase fitness level. There are a number of terms used within a Personal Activity Plan to describe type and intensity of activities.

**TYPES OF ACTIVITIES**

**Rest activities.** Activities that involve minimal physical effort (eg, homework, computer games and reading).

**Lifestyle activities.** Activities that are a part of a normal day (eg, walking, household chores and garbage sweeps).

**Aerobic activities.** Activities that improve aerobic fitness (eg, jogging, swimming and dancing).

**Aerobic sports.** Sports that involve a great deal of movement (eg, baseball, basketball and soccer).

**Muscular activities.** Activities that require strength (eg, weightlifting, wrestling and track and field sports).

**Flexibility activities.** Activities that involve stretching the muscles (eg, martial arts, stretching and yoga).

**INTENSITY OF ACTIVITIES**

**Rest.** Activities that involve sitting or standing, and little motion.

**Light.** Activities that involve slow movements, and are not tiring.

**Moderate.** Activities that are fairly intense (fall between light and vigorous).

**Vigorous.** Activities that involve quick movements or running, and increased respiration.

**ACTIVITY**

**OBJECTIVE**

The objective of this activity is to have the cadets update their Proficiency Level Three Personal Activity Plan.

**RESOURCES**

- Personal Activity Plan handout located at Attachment B,
- Cadet Fitness Assessment results, and
- Pens / pencils.

**ACTIVITY LAYOUT**

Nil.
ACTIVITY INSTRUCTIONS

1. Discuss how the results of the Cadet Fitness Assessment can be used to create goals.

   The Cadet Fitness Assessment determines personal fitness level through raw scores. A cadet who scored 5 on the push-up and 10 on the curl-up assessments, may wish to set a long-term goal to improve muscular fitness. Their short-term goal may be to complete 8 push-ups and 12 curl-ups on the next assessment.

2. Distribute the Personal Activity Plan handout, located at Attachment B, to each cadet.

3. Supervise and provide assistance while the cadets update their Personal Activity Plans for the current training year by:
   a. reviewing their Proficiency Level Three Personal Activity Plan;
   b. reviewing their Cadet Fitness Assessment results;
   c. listing current fitness and sports activities;
   d. identifying areas that need improvement;
   e. creating goals; and
   f. listing planned fitness and sports activities.

SAFETY

Nil.

CONFIRMATION OF TEACHING POINT 1

The cadets’ participation in the activity will serve as the confirmation of this TP.

END OF LESSON CONFIRMATION

The cadets’ updating their Personal Activity Plan will serve as the confirmation of this lesson.

CONCLUSION

HOMEWORK / READING / PRACTICE

The cadets should follow their Personal Activity Plan throughout the training year. The Personal Activity Plan will be evaluated by the cadet each time they complete the Cadet Fitness Assessment.

METHOD OF EVALUATION

Nil.

CLOSING STATEMENT

One of the aims of the cadet program is physical fitness. A Personal Activity Plan is an important tool for creating and achieving goals, and will help to track progress in physical fitness.
INSTRUCTOR NOTES / REMARKS

This lesson shall follow the start of year Cadet Fitness Assessment (EO M404.01 [Participate in the Cadet Fitness Assessment]).

Physical fitness resources can be printed or ordered from http://www.phac-aspc.gc.ca/pau-uap/fitness/downloads.html, through the Public Health Agency of Canada to be given as handouts to the cadets.

**Areas That Need Improvement:**

1. 20-m Shuttle Run Test score is low. Need to improve cardiovascular fitness.
2. Need to participate in more activities at a vigorous intensity.
3. Cut back on rest activities.

**GOALS**

Remember that goals must be:

- Specific,
- Measurable,
- Achievable,
- Relevant, and
- Timed.

**Long-term goal for the training year:** To increase personal fitness level.

**Short-term Goals:**

<table>

*Note. Created by Director Cadets 3, 2008, Ottawa, ON: Department of National Defence.*
EO M404.03 – EVALUATE PERSONAL ACTIVITY PLAN

Total Time: 30 min

PREPARATION

PRE-LESSON INSTRUCTIONS

Resources needed for the delivery of this lesson are listed in the lesson specification located in A-CR-CCP-804/PG-001, *Proficiency Level Four Qualification Standard and Plan*, Chapter 4. Specific uses for said resources are identified throughout the instructional guide within the TP for which they are required.

Review the lesson content and become familiar with the material prior to delivering the lesson.

PRE-LESSON ASSIGNMENT

Nil.

APPROACH

A practical activity was chosen for this lesson as it allows the cadets to evaluate their Personal Activity Plan in a safe and controlled environment.

INTRODUCTION

REVIEW

Nil.

OBJECTIVES

By the end of this lesson the cadet shall have evaluated their Personal Activity Plan.

IMPORTANCE

It is important for cadets to evaluate their Personal Activity Plan to determine if goals were met and to track progress in personal fitness.
Teaching Point 1  
Have the cadets evaluate their Personal Activity Plan.
Time: 25 min  
Method: Practical Activity

ACTIVITY

OBJECTIVE

The objective of this activity is to have the cadets evaluate their Personal Activity Plan.

RESOURCES

- Cadet Fitness Assessment results,
- Personal Activity Plan from the start of the training year.

ACTIVITY LAYOUT

Nil.

ACTIVITY INSTRUCTIONS

1. Distribute the cadet's Personal Activity Plan and Cadet Fitness Assessment results.
2. Have the cadets compare their start of year and end of year Cadet Fitness Assessment results.
3. Have the cadets compare their actual and planned fitness and sports activities.
4. Have the cadets complete the reflection portion of the Personal Activity Plan.

SAFETY

Nil.

CONFIRMATION OF TEACHING POINT 1

The cadet's evaluation of their Personal Activity Plan will serve as the confirmation of this TP.

END OF LESSON CONFIRMATION

The cadet's evaluation of their Personal Activity Plan will serve as the confirmation of this lesson.

CONCLUSION

HOMEWORK / READING / PRACTICE

Nil.

METHOD OF EVALUATION

Nil.

CLOSING STATEMENT

Evaluating a Personal Activity Plan will help determine if goals were met and track progress in personal fitness. This lesson promotes physical fitness, meeting one of the aims of the cadet program.
INSTRUCTOR NOTES / REMARKS

This lesson shall follow the end of year Cadet Fitness Assessment (EO M404.02 [Participate in the Cadet Fitness Assessment]).

Physical fitness resources can be printed or ordered from http://www.phac-aspc.gc.ca/pau-uap/fitness/downloads.html, through the Public Health Agency of Canada to be given as handouts to the cadets.

REFERENCES

EO C404.01 – DESCRIBE NUTRITION AND HYDRATION REQUIREMENTS FOR FITNESS AND SPORTS ACTIVITIES

Total Time: 60 min

PREPARATION

PRE-LESSON INSTRUCTIONS

Resources needed for the delivery of this lesson are listed in the lesson specification located in A-CR-CCP-804/PG-001, Proficiency Level Four Qualification Standard and Plan, Chapter 4. Specific uses for said resources are identified throughout the instructional guide within the TP for which they are required.

Review the lesson content and become familiar with the material prior to delivering the lesson.

Photocopy the handouts located at Attachments A, B and D–G for each cadet.

PRE-LESSON ASSIGNMENT

Have each cadet collect two food labels (one of a food and one of a fluid) from items they commonly consume and bring them to this lesson.

APPROACH

An interactive lecture was chosen for TPs 1 and 3 to orient the cadets to food labels and to the relationship between nutrition, hydration and fitness and sports activities.

An in-class activity was chosen for TP 2 as it is an interactive way for the cadets to estimate daily energy requirements.

INTRODUCTION

REVIEW

Nil.

OBJECTIVES

By the end of this lesson the cadet shall have described the nutrition and hydration requirements for fitness and sports activities.
IMPORTANCE

It is important for the cadets to have an understanding of the nutrition and hydration requirements for fitness and sports activities because research has proven that eating healthy foods will help the body to grow strong and prevent illnesses. The information in this lesson will assist with choosing healthy foods to meet energy requirements for fitness and sports activities.
Teaching Point 1
Explain food labels.
Time: 15 min
Method: Interactive Lecture

Distribute the Nutrition Facts handout located at Attachment A to each cadet.

PURPOSE OF NUTRITION INFORMATION
The nutrition information found on food labels is regulated by Health Canada through the Food and Drugs Act and includes an ingredients list, nutrition facts table and nutrition claims. This information makes it easier to:

- compare products;
- determine the nutritional value of foods;
- manage special diets; and
- increase or decrease intake of a particular nutrient.

INGREDIENTS LIST
Ingredients are listed by weight from highest to lowest. The ingredients list provides information for people who have food allergies and/or those who are avoiding specific foods.

NUTRITION FACTS TABLE
The nutrition facts table contains information on calories and important nutrients for a specified amount (serving) of the food. The core nutrients are listed in the table and include the amount (usually in grams or milligrams) and the percentage of daily value that is contained in the food. The daily value refers to the amount of a specific nutrient that is recommended each day. Vitamins and minerals are listed only by the percentage of the daily value.
Figure 1 Nutrition Facts Table

Direct the cadets to the example on the *Nutrition Facts* handout when describing the nutrition facts table. Other examples of food labels may be used as well.

**Core Nutrients**

**Calories.** A calorie is a measurement of food energy.

**Fat.** Fat as listed in the table includes saturated, trans, and all other fatty acids present in the food by quantity.

**Saturated and trans fats.** Saturated and trans fats are listed in the table because they may have a negative impact on health and should be consumed in moderation.

**Cholesterol.** Cholesterol is one of the fats found in blood. It is used to make cell membranes, vitamin D and hormones. There are two main types of cholesterol: low-density lipoprotein (LDL) cholesterol, which is considered the bad cholesterol and high-density lipoprotein (HDL) cholesterol, which is considered the good cholesterol. Cholesterol is listed in the table because high blood cholesterol is a risk factor for heart disease and stroke.

**Sodium.** Most sodium in food comes from sodium chloride, which is table or sea salt. Salt is a common ingredient in processed and prepared foods. Most people consume more salt than they require. Sodium is listed in the table because a low-sodium diet will reduce the risk of high blood pressure, stroke, and heart disease.

**Carbohydrate.** Carbohydrates are a primary source of energy for the body. There are two types of carbohydrates listed in the table: fibre, which is a complex carbohydrate, and sugar, which is a simple carbohydrate.

**Fibre.** Fibre is a complex carbohydrate found in plants. Unlike other carbohydrates it passes through the body undigested and is healthy for the digestive system. Fibre is listed in the table because it provides energy for the muscles and brain.
**Complex carbohydrates.** Complex carbohydrates break down slowly and can help prevent overeating. They are found in vegetables, fruit, whole grains, brown rice, nuts, soy products, and legumes.

**Sugars.** Sugar is a simple carbohydrate. Natural sugars are found in foods such as milk, fruit, and vegetables. Added sugars contribute calories and have no significant nutritional value. Sugars are listed in the table because some diets require sugars to be limited (e.g., diabetics).

**Simple carbohydrates.** Simple carbohydrates break down quickly and can cause a person to become hungry quickly. They are found in sugary soft drinks, sugary cereals, white bread, white rice, cookies, candy, fries, and pastries.

**Protein.** Protein is found in a variety of foods such as meat, poultry, fish, legumes, nuts, milk products, and grain products. It is listed in the table because protein builds muscles, bones, and teeth.

**Vitamin A.** Vitamin A is found in many vegetables and fruit. It is listed in the table because it will help keep skin healthy and low-light vision functional.

**Vitamin C.** Vitamin C is found in many vegetables and fruit. It is listed in the table because it will help the body fight infections.

**Calcium.** Calcium is found in milk and alternative foods. It is listed in the table because it will build strong bones and reduce the risk of osteoporosis (a disease where bones degenerate and become brittle).

**Iron.** Iron is found in foods such as meat, fish, poultry, grains, vegetables, fruit, nuts, and seeds. It is listed in the table because it helps the red blood cells carry oxygen throughout the body.

**NUTRITION CLAIMS**

A nutrition claim must meet a set of government rules before it may be printed on a food label. They may highlight a relation between diet and disease (e.g., a healthy diet rich in a variety of vegetables and fruit may help reduce the risk of some types of cancer). Nutrition claims may include the following words / phrases:

- free,
- low,
- less,
- more,
- reduced,
- lower,
- very high,
- light / lite,
- source of,
- high source of,
- good source of, and
- excellent source of.
CONFIRMATION OF TEACHING POINT 1

QUESTIONS:

Q1. How are food labels regulated?
Q2. How are ingredients listed on food labels?
Q3. What are three words that may be included in a nutrition claim?

ANTICIPATED ANSWERS:

A1. Health Canada regulates food labels through the *Food and Drugs Act*.
A2. Ingredients are listed by weight from highest to lowest on food labels.
A3. Nutrition claims may include the following words / phrases:
   - free,
   - low,
   - less,
   - more,
   - reduced,
   - lower,
   - very high,
   - light / lite,
   - source of,
   - high source of,
   - good source of, and
   - excellent source of.

Offer the cadets the opportunity to further evaluate their learning by distributing the Nutrition Facts Quiz located at Attachment B. Tell the cadets the Nutrition Facts Quiz Answer Key located at Attachment C will be posted in a common area.
Teaching Point 2  Conduct an activity where the cadets will estimate their daily energy requirements.

Time: 20 min  Method: In-Class Activity

Daily energy expenditures vary from one person to the other. Daily energy expenditures come from three sources:

1. resting energy expenditure,
2. thermic effect of food, and
3. caloric requirements for daily life.

RESTING ENERGY EXPENDITURE (REE)

REE is the minimum amount of energy (expressed in kilocalories [commonly referred to as calories] per day) our body needs to stay alive while at rest. This is the energy needed for actions such as breathing, digesting and keeping a heartbeat. REEs consist of about 60–70 percent of your daily energy needs. It may vary as much as 20 percent between individuals. Numerous factors account for this variation, such as:

- age,
- muscle mass,
- height and weight,
- gender, and
- amount of food consumed (overeating increases resting energy output while food restriction lowers it).

THERMIC EFFECT OF FOOD

Energy that is used by the body to digest and absorb the food is lost in the form of heat. This is called the thermic effect of food and varies depending on the type and amount of food eaten. It accounts for about 10 percent of energy output.

CALORIC REQUIREMENTS FOR DAILY LIFE

Each day's activities (eg, working, studying or playing sports) expend energy. The more active an individual is, the higher their caloric requirements.

Caloric needs vary based on the amount and intensity of the physical fitness activities. When an individual's physical fitness activities change, their eating habits should reflect those changes.

Distribute the Energy Expenditures for Physical Activity Table handout located at Attachment D to each cadet. Ask them what they find interesting and surprising from the chart.
ACTIVITY

Time: 15 min

OBJECTIVE

The objective of this activity is to have the cadets estimate their caloric need based on their daily activities.

RESOURCES

- Energy Expenditures for Physical Activity Table handout located at Attachment D,
- Estimated Daily Energy Requirements worksheet located at Attachment E,
- Resting Energy Expenditures Table handout located at Attachment F,
- Estimated Number of Servings table located at Attachment G,
- Pens / pencils, and
- Calculators.

ACTIVITY LAYOUT

Nil.

ACTIVITY INSTRUCTIONS

1. Distribute the Estimated Energy Requirements worksheets.
2. Have the cadets fill out the worksheet using other provided attachments.
3. Circulate around the class to help cadets who are experiencing difficulties.

SAFETY

Nil.

CONFIRMATION OF TEACHING POINT 2

The cadets' participation in the activity will serve as the confirmation of this TP.

Teaching Point 3

Describe nutrition and hydration requirements for fitness and sports activities.

Time: 15 min

Method: Interactive Lecture

Healthy eating provides the body with essential nutrients and energy. Everyday eating should include at least three meals and healthy snacking. An individual will perform more efficiently if the body's energy levels are consistently maintained.

Glucose is produced when carbohydrate foods are broken down by the digestive track and the liver. Glucose is the body's preferred fuel when performing hard physical work or exercising intensely. As well, the brain, nervous system and red blood cells depend completely on glucose for their fuel.
Carbohydrates are found in foods from all food groups. Fruit and root vegetables provide more than leafy vegetables and legumes (eg, beans, peas, lentils), grain products supply a large amount while seeds and nuts have some.

Carbohydrates and fat provide energy. Carbohydrates are stored in the body in the form of glycogen (a large molecule made up of glucose and water) and fat is stored in the body as fat. During high intensity exercise (eg, sprinting), glucose is the primary source of energy because fat cannot be used when oxygen is in short supply. During low-intensity exercise (eg, walking), cells use glucose and fat for energy since oxygen is available and make it possible for fat to be used. A well-conditioned individual has better oxygen delivery and can therefore use more fat than an individual with a lower fitness level.

Glycogen is used when necessary. The body can store only a small amount of glycogen. Glycogen is stored in the liver and the muscles. When the blood glucose level gets low, glycogen from the liver is converted to glucose and moved to the blood stream. Glycogen stored in the muscles is for muscle use only.

PRE-EXERCISE NUTRITION

Since carbohydrates are the fuel for high intensity workouts it is important to consume them prior to exercising. When there are too few carbohydrates, the body changes protein into glucose to provide energy, and prevents the proteins from doing their job (supply amino acids to build muscles, hormones, enzymes and other chemicals).

Time to Allow Between Meal and Activity

The length of time between a meal and a fitness or sports activity determines how much and what you should eat. Ideally, there should be:

- a 3- to 4-hour period to digest a large meal containing carbohydrates, protein and some fat;
- a 2- to 3-hour period to digest a small meal; or
- a 1- to 2-hour period for a carbohydrate snack or liquid meal.

Foods to Choose

Use the following guidelines when choosing food prior to fitness and sports activities:

- Drink fluids, such as water, fruit juice, milk or soup.
- Select foods high in carbohydrates, such as grain products, vegetables and fruit juice, low-fat milk or yogurt. Beans, peas and lentils are sources of slowly released carbohydrate, but unless they are eaten regularly these high fibre foods might cause discomfort.
- Select foods that are easy to digest. Since proteins and fats are digested slowly, it is better to limit them, particularly fat, especially if exercising intensely soon after eating.
- Select familiar foods in order not to upset the stomach.
- Avoid spicy or high in fibre foods unless they can be tolerated.

DURING EXERCISE

Water is essential. Even a small amount of dehydration (1 percent of body weight) can increase cardiovascular strain as indicated by a disproportionate elevation of heart rate during exercise and limit the ability of the body to transfer heat from contracting muscles to the skin’s surface where heat can be dissipated to the environment.
For fitness and sports activities less than one hour, water is all that is needed.

For fitness and sports activities that are longer than an hour, a high demand is placed on stored energy. Consuming carbohydrates during the activity will delay fatigue and improve performance. According to the American College of Sports Medicine (ACSM) Fitness Book, "Several research studies have demonstrated the improved performance potential of ingesting carbohydrates during activity, so this should be an important strategy for all persons involved in regular physical activity".

For fitness and sports activities longer than one hour, carbohydrates (from fluids or foods) should be consumed to maintain the blood glucose level and preserve glycogen stores. For training sessions that last several hours, carbohydrate-rich fluids and foods keep energy levels high and help an individual stay focused.

**What to Drink**

For fitness and sports activities longer than one hour, fluids should contain:

- carbohydrates in concentration of 4–8 percent (which is equivalent to 40–80 g of carbohydrates per litre of fluid), and
- sodium (a pinch of salt) which adds taste and increases fluid intake.

Sports drinks are designed so fluid and some carbohydrates enter your blood stream quickly. They have no other nutrients.

If a fluid has too many carbohydrates, it can be diluted with water to meet the concentration requirements.

Urine volume and colour are simple indicators of hydration status. Ample quantities of lemon juice-coloured urine mean an individual is well hydrated while dark coloured, small volume and infrequent urination mean dehydration.

**What to Eat**

When an individual trains several times a day, there are opportunities to consume solid snacks between workouts. Those snacks should consist of foods that are easy to digest (low in fibre and in fat—less than 3 g of fat per 30-g serving). To maintain energy levels, the intake of carbohydrates during exercise should be between 30 g and 60 g per hour.

**POST-EXERCISE**

When an individual has been sweating heavily during fitness and sports activities, fluid replacement is the primary concern. Eating carbohydrates within 15 minutes of the end of the fitness or sports activity will refill muscle glycogen stores. Fat will slow the rate of absorption. Directly after physical activity, look for low fat foods, high in carbohydrates with little protein.

**CONFIRMATION OF TEACHING POINT 3**

**QUESTIONS:**

Q1. What fluid should be consumed during fitness and sports activities of less than one hour?

Q2. What is an indicator of hydration status and how does it indicate it?

Q3. What is the primary concern after exercising?
ANTICIPATED ANSWERS:

A1. Water is to be consumed during fitness and sports activities of less than one hour.

A2. Urine volume and colours are indicators of hydration status. Ample quantities of lemon juice-coloured urine indicate good hydration while dark coloured, small volume infrequent urination indicates dehydration.

A3. Fluid replacement is the primary concern after exercising.

END OF LESSON CONFIRMATION

QUESTIONS:

Q1. What is the purpose of including an ingredients list, nutrition facts table and nutrition claims on a food label?

Q2. What factors account for the REE variation between individuals?

Q3. What is the body’s preferred fuel when performing hard physical work or exercising intensely?

ANTICIPATED ANSWERS:

A1. This information makes it easier to:
   • compare products;
   • determine the nutritional value of foods;
   • manage special diets; and
   • increase or decrease intake of a particular nutrient.

A2. REE variation can be accounted for by factors, such as:
   • age,
   • muscle mass,
   • height and weight,
   • gender, and
   • amount of food consumed (overeating increases resting energy output while food restriction lowers it).

A3. The body’s preferred fuel when performing hard physical work or exercising intensely is glucose.

CONCLUSION

HOMEWORK / READING / PRACTICE

Nil.

METHOD OF EVALUATION

Nil.
CLOSING STATEMENT

Meeting energy requirements is an important part of performing well and staying healthy while being active. Eating healthy foods will help the body grow strong, prevent illnesses, and maintain energy. Choosing healthy foods and consuming a sufficient amount of nutrients and energy is important to personal fitness and healthy living.

INSTRUCTOR NOTES / REMARKS

Nil.

## Nutrition Facts

To Help You Make Informed Food Choices

The "Nutrition Facts" table is easy to find, easy to read and on more foods

Information in the Nutrition Facts table is based on a specific amount of food. Compare this to the amount you eat.

Use % Daily Value to see if a food has a little or a lot of a nutrient.

<table>
<thead>
<tr>
<th>Nutrition Facts</th>
<th>Per 125 mL (87 g)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amount</td>
<td>% Daily Value</td>
</tr>
<tr>
<td>Calories</td>
<td>80</td>
</tr>
<tr>
<td>Fat</td>
<td>0.5 g</td>
</tr>
<tr>
<td>Saturated Fat</td>
<td>0 g</td>
</tr>
<tr>
<td>Trans Fat</td>
<td>0 g</td>
</tr>
<tr>
<td>Cholesterol</td>
<td>0 mg</td>
</tr>
<tr>
<td>Sodium</td>
<td>0 mg</td>

With the nutrition information on food labels you will be able to:

- Compare products more easily
- Determine the nutritional value of foods
- Better manage special diets
- Increase or decrease your intake of a particular nutrient

Nutrition Information on Food Labels

Use Nutrition Facts, the list of ingredients and nutrition claims to help you make informed food choices.

Nutrition Claims

The Government sets rules that must be met before a nutrition claim can be made on a label or advertisement.

A claim highlights a nutrition feature of a food.

Look for one of these words:

- free
- reduced
- source of
- low
- lower
- high source of
- less
- very high
- good source of
- more
- light/lite
- excellent source of

A claim may also highlight a relationship between diet and disease. For example:

- A healthy diet rich in a variety of vegetables and fruit may help reduce the risk of some types of cancer.
- A healthy diet low in saturated and trans fats may reduce the risk of heart disease.

Ingredient List

- Ingredients in the food are listed by weight from most to least.
- The ingredient list is a source of information for people with allergies or for people who avoid certain ingredients based on their beliefs.

Follow Canada's Food Guide to Healthy Eating and use Nutrition Facts to help you make healthy food choices.

Enjoy eating well, being active and feeling good about yourself.

NUTRITION FACTS QUIZ

1. Are the following statements true or false:
   a. The nutrition facts table contains information on calories and important nutrients for a specific amount (serving) of the food. _____
   b. On a label, vitamins are listed only by the percentage of the daily value. _____
   c. Ingredients on a label are listed by weight from lowest to highest. _____
   d. Nutrition information helps to manage special diets and compare products. _____

2. Match the word to its appropriate definition.

<table>

<td>Vitamin C</td>
<td>Calcium</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1. Measurement of food energy.
2. It is a necessary part of your diet because it supplies essential fatty acids and is needed to absorb fat-soluble vitamins (A, D, E and K). It reduces hunger because it is absorbed slowly. It should account for 10–35 percent of the energy of your diet. It provides 9 kcal / g.
3. One of the fats found in the blood. It is used to make cell membranes, vitamin D and hormones.
4. Most of it is from table or sea salt. Most people consume more than they require. Reducing this nutrient will reduce the risk of high blood pressure, stroke, and heart disease.
5. Primary source of energy for the body. There are two types: fibre, which is a complex one, and sugar, which is a simple one. Should account for 45–65 percent of the energy of your diet. It provides 4 kcal / g.
6. Complex carbohydrate found in plants. Unlike other carbohydrates it passes through the body undigested and is healthy for the digestive system.
7. It is a simple carbohydrate. Natural ones are found in foods such as milk, fruit, and vegetables. Added ones contribute calories and have no significant nutritional value.
8. Found in a variety of foods such as meat, poultry, fish, legumes, nuts, milk products, and grain products. Builds muscles, bones, and teeth. Should account for 10–35 percent of the energy of your diet. It provides 4 kcal / g.
10. Found in many vegetables and fruit. Helps the body fight infections.
11. Found in milk and alternative foods. Builds strong bones and reduces the risk of osteoporosis (a disease where bones degenerate and become brittle).
12. Found in foods such as meat, fish, poultry, grains, vegetables, fruit, nuts, and seeds. Helps the red blood cells carry oxygen throughout the body.
NUTRITION FACTS QUIZ
Answer Key

1. **Are the following statements true or false:**
   a. The nutrition facts table contains information on calories and important nutrients for a specific amount (serving) of the food. **TRUE**
   b. On a label, vitamins are listed only by the percentage of daily value. **TRUE**
   c. Ingredients on a label are listed by weight from lowest to highest. **FALSE**, it is from highest to lowest, decreasing.
   d. Nutrition information helps to manage special diet and compare products. **TRUE**. It also helps to determine the nutritional value of food and gives information for people who need to increase or decrease intake of a particular nutrient.

2. **Match the word to its appropriate definition.**

<table>
<thead>
<tr>
<th>Vitamin A</th>
<th>Carbohydrate</th>
<th>Cholesterol</th>
<th>Fibre</th>
<th>Sugar</th>
<th>Fat</th>
</tr>
</thead>
<tbody>
<tr>
<td>Iron</td>
<td>Sodium</td>
<td>Vitamin C</td>
<td>Calcium</td>
<td>Calories</td>
<td>Protein</td>
</tr>
</tbody>
</table>

1. Measurement of food energy. **Calories**
2. It is a necessary part of your diet because it supplies essential fatty acids and is needed to absorb fat-soluble vitamins (A, D, E and K). It reduces hunger because it is absorbed slowly. It should account for 10–35 percent of the energy of your diet. It provides 9 kcal/g. **Fat**
3. One of the fats found in the blood. It is used to make cell membranes, vitamin D and hormones. **Cholesterol**
4. Most of it is from table or sea salt. Most people consume more than they require. Reducing this nutrient will reduce the risk of high blood pressure, stroke, and heart disease. **Sodium**
5. Primary source of energy for the body. There are two types: fibre, which is a complex one, and sugar, which is a simple one. Should account for 45–65 percent of the energy of your diet. It provides 4 kcal/g. **Carbohydrate**
6. Complex carbohydrate found in plants. Unlike other carbohydrates it passes through the body undigested and is healthy for the digestive system. **Fibre**
7. It is a simple carbohydrate. Natural ones are found in foods such as milk, fruit, and vegetables. Added ones contribute calories and have no significant nutritional value. **Sugars**
8. Found in a variety of foods such as meat, poultry, fish, legumes, nuts, milk products, and grain products. Builds muscles, bones, and teeth. Should account for 10–35 percent of the energy of your diet. It provides 4 kcal/g. **Protein**
9. Found in many vegetables and fruit. Helps keep skin and eyesight healthy. **Vitamin A**
10. Found in many vegetables and fruit. Helps the body fight infections. **Vitamin C**
11. Found in milk and alternative foods. Builds strong bones and reduces the risk of osteoporosis (a disease where bones degenerate and become brittle). **Calcium**
12. Found in foods such as meat, fish, poultry, grains, vegetables, fruit, nuts, and seeds. Helps the red blood cells carry oxygen throughout the body. **Iron**
# ENERGY EXPENDITURES FOR PHYSICAL ACTIVITY TABLE

Many references evaluate the amount of calories burnt during various activities. This table is a guide, understanding that other resources could suggest different values. Values below are for activities of a one-hour duration.

**Figure D-1  Energy Expenditures for Physical Activity Table**

ESTIMATED DAILY ENERGY REQUIREMENTS

CALCULATE YOUR REE

Common formulas used to approximate your energy needs are the Harris-Benedict Equations. (Weight in kilograms, height in centimetres and age in years)

Male: \[ \text{REE} = 66 + (13.75 \times \text{weight}) + (5 \times \text{height}) - (6.76 \times \text{age}) \]
Female: \[ \text{REE} = 655 + (9.56 \times \text{weight}) + (1.85 \times \text{height}) - (4.68 \times \text{age}) \]

See the Resting Energy Expenditures Table handout located at Attachment F for additional help.

Your estimated REE: _______________ kilocalories (commonly referred to as calories).

CALCULATE THE THERMIC EFFECT OF FOOD

Take your REE and multiply it by 10 percent (which is equivalent to multiplying by 0.1).

\[ \text{REE} \times 0.1 = \text{_____ kcal} \]

CALCULATE YOUR ENERGY REQUIREMENTS FOR DAILY ACTIVITIES

1. List your daily activities.
2. Using the Energy Expenditures for Physical Activity Table located at Attachment D, determine the hourly energy requirements for each activity.
3. Write how much time you spend doing each activity (1/2, 1, 2 or more hours).
4. Calculate the total energy requirements (multiply values in the hourly energy requirements column by values in the number of hours of activity column).
5. Add the values in the total energy requirements column to obtain the total energy requirements for daily activities.

<table>
<thead>
<tr>
<th>Activity</th>
<th>Hourly energy requirements</th>
<th>Number of hours of activity</th>
<th>Total energy requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Total energy requirements for daily activities

Daily energy requirement = \[ \text{REE} + \text{Thermic effect} + \text{Energy for activities} \]

\[ \text{_____} + \text{__________} + \text{____________________} = \text{________} \text{ kcal} \]

Determine number of servings required from Estimated Number of Servings table located at Attachment G.
RESTING ENERGY EXPENDITURES TABLE
(in kcal)

This table does not include all possible body sizes. It should only be used as a guide to verify if the calculations are within the correct range.

Figure F-1 Resting Energy Expenditures Table

*Note.* Created by Director Cadets 3, 2008, Ottawa, ON: Department of National Defence.
## ESTIMATED NUMBER OF SERVINGS

The following chart gives an estimate of the number of servings needed to meet the daily energy requirements.

<table>
<thead>
<tr>
<th>Food Group</th>
<th>1 500 kcal</th>
<th>2 000 kcal</th>
<th>2 500 kcal</th>
<th>3 000 kcal</th>
<th>3 500 kcal</th>
<th>4 000 kcal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Servings</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Grain Products (Minimum 5 servings)</td>
<td>5–6</td>
<td>7–9</td>
<td>9–11</td>
<td>11–13</td>
<td>13–15</td>
<td>15–17</td>
</tr>
<tr>
<td>Vegetables and fruit (Minimum 5 servings)</td>
<td>5–6</td>
<td>7–9</td>
<td>9–11</td>
<td>11–13</td>
<td>13–15</td>
<td>15–17</td>
</tr>
<tr>
<td>Milk products (Minimum 2 servings)</td>
<td>3</td>
<td>3</td>
<td>3</td>
<td>3–4</td>
<td>3–5</td>
<td>4–6</td>
</tr>
<tr>
<td>Meat &amp; Alternatives (Minimum 2 servings)</td>
<td>2</td>
<td>2</td>
<td>2</td>
<td>2–3</td>
<td>2–4</td>
<td>3–4</td>
</tr>
<tr>
<td>Other Foods</td>
<td>Choose other foods in moderation after you have eaten enough from the four other food groups.</td>
<td>If you find it difficult to eat a large enough volume of food to meet your energy needs, try adding a little oil (olive, canola, soy, etc) or a few concentrated carbohydrates (juices, dried fruit, sweetened cereals or drinks)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

If you are very physically active, add the number of servings from 2 columns. For example, if you need 4 500 kcal, use the servings for 3 000 kcal plus those from 1 500 kcal.

If this is more food than you can comfortably eat or if you cannot maintain your body weight because you are training so much, try eating foods that have more energy and less volume. For example, juice or dried fruit rather than salad, 2 percent milk rather than skim milk, and / or nuts and seeds rather than beans.

COMMON TRAINING
PROFICIENCY LEVEL FOUR
INSTRUCTIONAL GUIDE

SECTION 5
EO C404.02 – PREPARE TO CONDUCT THE CADET FITNESS ASSESSMENT

Total Time: 60 min

PREPARATION

PRE-LESSON INSTRUCTIONS

Resources needed for the delivery of this lesson are listed in the lesson specification located in A-CR-CCP-804/PG-001, Proficiency Level Four Qualification Standard and Plan, Chapter 4. Specific uses for said resources are identified throughout the instructional guide within the TP for which they are required.

Review the lesson content and become familiar with the material prior to delivering the lesson.

Photocopy the enabling objective, lesson specification and instructional guide for EO M404.01 / M304.02 (Participate in the Cadet Fitness Assessment) and the Prepare to Conduct the Cadet Fitness Assessment handout located at Attachment A for each cadet.

Gather all equipment associated with the Cadet Fitness Assessment.

PRE-LESSON ASSIGNMENT

Nil.

APPROACH

An interactive lecture was chosen for TP 1 to present basic material on the components of the Cadet Fitness Assessment and to generate interest in the subject.

An in-class activity was chosen for TP 2 as it is an interactive way to provoke thought, stimulate interest and become familiar with the enabling objective, lesson specification and instructional guide for EO M404.01 / EO M304.02 (Participate in the Cadet Fitness Assessment).

INTRODUCTION

REVIEW

Nil.

OBJECTIVES

By the end of this lesson the cadet shall be prepared to conduct the Cadet Fitness Assessment.
IMPORTANCE

It is important for the cadets to prepare to conduct the Cadet Fitness Assessment because they may be expected to conduct the assessment at the squadron. The Cadet Fitness Assessment will be conducted at least two times throughout the training year to track personal fitness levels. The information provided by the assessment will also help to create personal fitness goals, improve personal fitness and award Cadet Fitness Assessment Incentive Levels.
<table>
<thead>
<tr>
<th>Teaching Point 1</th>
<th>Describe the components of the Cadet Fitness Assessment.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time: 35 min</td>
<td>Method: Interactive Lecture</td>
</tr>
</tbody>
</table>

The cadets are familiar with the Cadet Fitness Assessment as they have participated in it a number of times. This TP provides a summary of the components of the Cadet Fitness Assessment to prepare the cadets to conduct the assessment.

**THE SEQUENCE FOR THE CADET FITNESS ASSESSMENT**

The Cadet Fitness Assessment is conducted with the cardiovascular component (20-m Shuttle Run Test) being completed first. The remaining components are set up as a circuit. The cadets complete the assessment with a partner who will track the scores.

**THE CARDIOVASCULAR COMPONENT**

**The 20-m Shuttle Run Test**

Describe and show the cadets how to set up the 20-m Shuttle Run Test. If time permits, allow the cadets to set up the 20-m Shuttle Run Test during this lesson.

**Objective of the 20-m Shuttle Run Test**

The 20-m Shuttle Run Test is progressive, in that it begins with an easy pace and gradually becomes more challenging as time passes. The 20-m Shuttle Run Test is an individual assessment and is based on a personal ability.

The 20-m Shuttle Run Test consists of running a distance of 20 m repeatedly, at a specified pace that increases each minute. Each cadet will be expected to run until they can no longer continue.

**Setting up the 20-m Shuttle Run Test**

Equipment required for the 20-m Shuttle Run Test includes:

- 20-m Shuttle Run Test CD,
- measuring tape,
- CD player, and
- pylons.

The 20-m Shuttle Run Test will be set up with two lines (pylons) a distance of 20 m apart. A number of 100–150 cm (40–60 inch) lanes will be created for the run (depending on the number of cadets), as illustrated in Figure 1. Ensure the CD player is close by and can be heard by all cadets.
Conducting the 20-m Shuttle Run Test

1. Divide the cadets into pairs.
2. Distribute the 20-m Shuttle Run Test Individual Scoresheet B and pens / pencils to one cadet in each pair.
3. Have the cadets with the scoresheet print their partner’s name on the scoresheet and sit behind the starting line.
4. Have the cadets who are running the 20-m Shuttle Run Test line up in their respective lanes at the starting line and wait for instructions from the CD.
5. Play the CD. The scorekeeper will record the number of laps that are successfully completed on the scoresheet. The supervisors at each line will inform the scorekeeper when a cadet does not cross the line before the beep.
6. The 20-m Shuttle Run Test is complete when all the cadets have not reached the line before the beep for the second time.
7. Once completed, have the cadets who ran the 20-m Shuttle Run Test become the scorekeepers and the scorekeepers become the runners.

Scoring the 20-m Shuttle Run Test

The 20-m Shuttle Run Test will be scored using the 20-m Shuttle Run Test Individual Scoresheet B, located at Attachment B to EO M404.01 / M304.02 (Participate in the Cadet Fitness Assessment) Instructional Guide. Each circle on the scoresheet represents a lap. When the cadet completes a lap they receive a check mark. If they are unsuccessful they receive an X (as illustrated in Figure 2). The cadet has completed the 20-m Shuttle Run Test when they are unable to successfully complete a lap a second time.
THE MUSCULAR STRENGTH COMPONENT

The Curl-Up

Describe and show the cadets how to set up the curl-up. If time permits, allow the cadets to set up the curl-up station during this lesson.

Objective of the Curl-Up

The curl-up with knees bent and feet unanchored was chosen because it is a safe method for assessing abdominal strength and endurance.

Figure 2  Sample Fitnessgram 20-m Shuttle Run Test Individual Scoresheet B

This assessment is conducted by curling up repeatedly at a pace of one curl-up every three seconds until a second form correction is made (the first form correction does not count), the person can no longer continue, or has completed 75 curl-ups.

**Setting Up the Curl-Up**

Equipment required for the curl-up includes:

- gym mat, and
- curl-up measuring strip.

Each curl-up station will be set up with a gym mat and a curl-up measuring strip.

**Conducting the Curl-Up**

1. Have one cadet from each pair:
   a. lay on their back with head down;
   b. bend their knees at an angle of approximately 140 degrees;
   c. place their feet flat and legs slightly apart; and
   d. rest their palms on the mat with their arms straight, parallel to their trunk, and fingers stretched out (as illustrated in Figure 3).

2. The scorekeeper will place the measuring strip on the mat under the cadet's knees so their fingertips are resting on the nearest edge of the measuring strip (as illustrated in Figure 3).

3. The cadet on the mat will curl up (as illustrated in Figure 4), ensuring their fingers reach the other side of the measuring strip (as illustrated in Figure 5), repeatedly at a cadence of one curl every three seconds until a second form correction (the first form correction does not count) is made, they can no longer continue, or have completed 75 curl-ups.
4. The scorekeeper will count how many times the cadet can curl-up (which is the curl-up score).

5. Have the cadets switch positions and repeat Steps 1–4.

**Scoring the Curl-Up**

Scoring for the curl-up is based on the number of curl-ups that are completed; until a second form correction (the first form correction does not count) is made, the cadet can no longer continue, or has completed 75 curl-ups.

**The Push-Up**

Describe and show the cadets how to set up the push-up. If time permits, allow the cadets to set up the push-up station during this lesson.
Objective of the Push-Up

The push-up from an elbow angle of 90 degrees is an assessment of upper body strength and endurance. This assessment is conducted by pushing up repeatedly at a pace of one push-up every three seconds until a second form correction is made (the first form correction does not count) or the person can no longer continue.

Conducting the Push-Up

1. Have one cadet from each pair:
   a. lay face down;
   b. place their hands under or slightly wider than their shoulders, with fingers stretched out;
   c. straighten their legs with feet slightly apart; and
   d. tuck their toes under the shins.

2. Have the cadet push up with their arms until they are straight, keeping the legs and back aligned (as illustrated in Figure 6).

3. Have the cadet lower their body using their arms until the elbows bend at a 90-degree angle and the upper arms are parallel to the floor (as illustrated in Figure 7).

Figure 6   Push-Up Starting Position

*Note. From Fitnessgram / Activitygram: Test Administration Manual (3rd ed.) (p. 48), by The Cooper Institute, 2005, Windsor, ON: Human Kinetics. Copyright 2005 by The Cooper Institute.*
4. Have the cadet repeat Steps 2 and 3 repeatedly at a cadence of one push-up every three seconds until a second form correction (the first form correction does not count) is made, or they can no longer continue.

5. The scorekeeper will count how many times the cadet can complete a push-up (which is the push-up score).

6. Have the cadets switch positions and repeat Steps 1–5.

**Scoring the Push-Up**

Scoring for the push-up is based on the number of push-ups that are completed; until a second form correction (the first form correction does not count) is made, or the cadet can no longer continue.

**THE MUSCULAR FLEXIBILITY COMPONENT**

**The Trunk Lift**

Describe and show the cadets how to set up the trunk lift. If time permits, allow the cadets to set up the trunk lift station during this lesson.

**Objective of the Trunk Lift**

The trunk lift is an assessment of trunk strength and flexibility.

It is important to discourage cadets from hyperextending their backs during this assessment.

This assessment is conducted by lying on the stomach and lifting the trunk to the highest comfortable position.
Setting Up the Trunk Lift

Equipment required for the trunk lift includes:

- gym mat, and
- trunk lift measuring device.

Each trunk lift station will be set up with a gym mat and a trunk lift measuring device.

Conducting the Trunk Lift

1. Have one cadet from each pair:
   a. lay face down on the mat;
   b. point their toes towards the end of the mat; and
   c. place their hands under thighs (as illustrated in Figure 8).

2. Place a marker on the mat aligned with the cadet's eyes (as illustrated in Figure 8).

3. Have the cadet lift their upper body off the floor in a slow and controlled manner, to a maximum height of 30 cm (12 inches) (as illustrated in Figure 9). Ensure their head is aligned straight with the spine.
4. Have the cadet hold this position until the height can be measured (as illustrated in Figure 10).

Figure 10  Measuring The Trunk Lift

5. The scorekeeper will measure the distance, in inches, between the mat and the cadet's chin to determine the trunk lift score. The score will be a maximum of 12 inches to prevent hyperextension.

6. Have the cadets switch positions and repeat Steps 1–5.

Scoring the Trunk Lift

Scoring for the trunk lift is based on the distance, in inches, between the mat and the chin, to a maximum of 12 inches.

The Shoulder Stretch

Describe and show the cadets how to set up the shoulder stretch. If time permits, allow the cadets to set up the shoulder stretch station during this lesson.

Objective of the Shoulder Stretch

The shoulder stretch is an assessment of upper arm and shoulder flexibility.

This assessment is conducted by reaching one arm over the shoulder on the same side, and the other arm behind the back to touch the fingertips.

Setting Up the Shoulder Stretch

There is no equipment required for the shoulder stretch.

The shoulder stretch station should be large enough to accommodate the cadets.

Conducting the Shoulder Stretch

1. Have one cadet from each pair test their right shoulder by:
   a. reaching with the right hand over the right shoulder and down the back; and
   b. reaching with the left hand behind the back to touch the right hand (as illustrated in Figure 11).
2. The scorekeeper will observe if the hands are touching to determine the right shoulder stretch score (a yes or no).

3. Have the cadet test their left shoulder by:
   a. reaching with the left hand over the left shoulder and down the back; and
   b. reaching with the right hand behind the back to touch the left hand (as illustrated in Figure 12).

4. The scorekeeper will observe if the hands are touching to determine the left shoulder stretch score.

5. Have the cadets switch positions and repeat Steps 1–4.

**Scoring the Shoulder Stretch**

Scoring for the shoulder stretch is based on the cadet's ability to touch their fingers on both their right and left sides. The score is indicated with a yes (Y) or no (N) on the scoresheet.
The Back-Saver Sit and Reach

Describe and show the cadets how to set up the back-saver sit and reach. If time permits, allow the cadets to set up the back-saver sit and reach station during this lesson.

Objective of the Back-Saver Sit and Reach

The back-saver sit and reach assesses hamstring flexibility for each leg.

This assessment is conducted by placing the foot flat against the test apparatus, bending the other leg, and reaching forward with both hands. The same procedure is repeated for the other leg.

Setting Up the Back-Saver Sit and Reach

The only piece of equipment required for the back-saver sit and reach is the test apparatus.

Ensure that there is a test apparatus for each group. Spread out each back-saver sit and reach station to allow enough room for the cadets and their scorekeepers.

Conducting the Back-Saver Sit and Reach

1. Have one cadet from each pair remove their shoes.
2. Have the cadet:
   a. sit in front of the test apparatus;
   b. extend one leg fully with the foot flat against the face of the box;
   c. bend the knee of the other leg with the sole of the foot flat on the floor;
   d. ensure there is a 5- to 8-cm (2- to 3-inch) space between the knee on the straight leg, and the foot of the bent leg; and
   e. extend their arms forward over the ruler with the hands placed on top of one another (as illustrated in Figure 13).
3. Have the cadet reach forward with both hands along the scale four times, holding the position on the fourth reach for at least one second (as illustrated in Figure 14).

4. The scorekeeper will measure the distance, in inches, that the cadet reached. This measurement will be the score for one leg, to a maximum of 12 inches to prevent hyperextension.

5. Have the cadet repeat Steps 1–3 for the other leg.

6. Have the cadets switch positions and repeat Steps 1–5.

**Scoring the Back-Saver Sit and Reach**

Scoring for the back-saver sit and reach is based on the distance, in inches, that the cadet can reach with their hands for each leg, to a maximum of 12 inches.
CONFIRMATION OF TEACHING POINT 1

QUESTIONS:

Q1. What scoresheet is used to score the 20-m Shuttle Run Test?

Q2. How is the curl-up scored?

Q3. What does the push-up assess?

ANTICIPATED ANSWERS:

A1. The 20-m Shuttle Run Test will be scored using the 20-m Shuttle Run Test Individual Scoresheet B.

A2. The curl-up is scored by counting the number of curl-ups completed.

A3. The push-up assesses upper body strength and endurance.

Teaching Point 2 Conduct an activity where the cadets will become familiar with the enabling objective, lesson specification and instructional guide for EO M404.01 / M304.02 (Participate in the Cadet Fitness Assessment).

Time: 15 min Method: In-Class Activity

OBJECTIVE

The objective of this activity is to have the cadets become familiar with EO M404.01 / M304.02 (Participate in the Cadet Fitness Assessment) enabling objective, lesson specification and instructional guide.

RESOURCES

- EO M404.01 / M304.02 (Participate in the Cadet Fitness Assessment) enabling objective, lesson specification and instructional guide,
- Prepare to Conduct the Cadet Fitness Assessment handout located at Attachment A, and
- Prepare to Conduct the Cadet Fitness Assessment answer key located at Attachment B.

ACTIVITY LAYOUT

Nil.

ACTIVITY INSTRUCTIONS

1. Distribute a copy of the enabling objective, lesson specification and instructional guide for EO M404.01 / M304.02 (Participate in the Cadet Fitness Assessment) and a Prepare to Conduct the Cadet Fitness Assessment handout located at Attachment A to each cadet.

2. Have the cadets read the documents and answer the questions on the handout.

3. Discuss the answers to the questions on the handout (answer key is located at Attachment B).
SAFETY
Nil.

CONFIRMATION OF TEACHING POINT 2
The cadets’ participation in the activity will serve as the confirmation of this TP.

END OF LESSON CONFIRMATION
The cadets’ participation in the activities will serve as the confirmation of this lesson.

CONCLUSION

HOMEWORK / READING / PRACTICE
Nil.

METHOD OF EVALUATION
Nil.

CLOSING STATEMENT
This lesson provides background information on how to prepare to conduct the Cadet Fitness Assessment. This information will be helpful when conducting the Cadet Fitness Assessment at the squadron. Results from the Cadet Fitness Assessment are helpful in tracking personal fitness level, setting fitness goals, promoting lifelong fitness and for awarding Cadet Fitness Assessment Incentive Levels.

INSTRUCTOR NOTES / REMARKS
This lesson should be conducted prior to EO M404.01 (Participate in the Cadet Fitness Assessment).

The cadets will be provided the opportunity to conduct the Cadet Fitness Assessment during EO M404.01 (Participate in the Cadet Fitness Assessment).

REFERENCES

PREPARE TO CONDUCT THE CADET FITNESS ASSESSMENT

Read EO M404.01 / M304.02’s (Participate in the Cadet Fitness Assessment) enabling objective, lesson specification and instructional guide. Answer the following questions.

ENABLING OBJECTIVE / LESSON SPECIFICATION

1. What are the cadets given to participate in the Cadet Fitness Assessment?

2. What method of instruction is used for this lesson?

INSTRUCTIONAL GUIDE

3. What layout is used for the muscular strength and muscular flexibility components (stations)?

4. What is located at Attachment A?

5. What distance separates the two lines for the 20-m Shuttle Run Test?

6. Why was the curl-up chosen for the Cadet Fitness Assessment?
7. How is the push-up scored?

8. What equipment is required for the trunk lift?

PREPARE TO CONDUCT THE CADET FITNESS ASSESSMENT

ANSWER KEY

Read EO M404.01 / M304.02's (Participate in the Cadet Fitness Assessment) enabling objective, lesson specification and instructional guide. Answer the following questions.

ENABLING OBJECTIVE / LESSON SPECIFICATION

1. What are the cadets given to participate in the Cadet Fitness Assessment?
   - Cadet Fitness Assessment scoresheet,
   - Pylons,
   - Measuring tape,
   - Gym mats,
   - CD player,
   - 30-cm (12-inch) ruler,
   - Small cardboard box, and
   - Supervision.

2. What method of instruction is used for this lesson? A practical activity.

INSTRUCTIONAL GUIDE

3. What layout is used for the muscular strength and muscular flexibility components (stations)?
   - A circuit.

5. What distance separates the two lines for the 20-m Shuttle Run Test? 20 m.

6. Why was the curl-up chosen for the Cadet Fitness Assessment? The curl-up was chosen because it is a safe method for assessing abdominal strength and endurance.

7. How is the push-up scored? Scoring for the push-up is based on the number of push-ups that are completed, until a second form correction is made or the participant can no

8. What equipment is required for the trunk lift?  
   - Gym mat, and
   - Trunk lift measuring device.
